## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Levaughn et al. (US 7150755).

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Levaughn et al discloses the claimed invention including a carrier base (142) defining a plurality of guide channels (at 152); a cover mounted on the carrier base to define a housing enclosing the plurality of guide channels and defining a plurality of openings, each opening aligned with an end of one of the guide channels (152); a plurality of lancets (144,172), each lancet having a body with a sharp tip (114) extending therefrom and an endcap (147,174) removably positioned over the sharp tip (114), each

lancet (144,172) associated with one of the guide channels (152) and traversing a path between a retracted position fully within the housing and an extended position wherein at least the sharp tip projects through one of the openings; a plurality of drive springs (156), each spring (156) interfacing at a first end with the housing and interfacing at a second end with one of the lancets (114,172); a plurality of lancet retainers (318), each lancet retainer (318) associated with one of the openings in the housing, and movable between a first position covering that opening and a second position uncovering that opening, and wherein each lancet retainer (318) retains its associated lancet in the first position and releases the associated lancet in the second position; and a trigger (162) operable to actuate any of the plurality of lancets (144,172) released by its associated lancet retainer (318).

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Conway et al. (US 7377904) discloses a medical lancing device including multi-lancet.
